Major depressive disorder (MDD) is often seen in patients with comorbid medical conditions. Selection of pharmacologic and nonpharmacological treatment options as well as other management strategies can be difficult to navigate due to the complicated pathophysiology in the underlying disorders and the complex nature of the therapies. In this exciting virtual forum two experts, Madhukar Trivedi, MD, and Sloan Manning, MD, will do a deep dive into cardiovascular disease and issues that may be faced by clinicians when managing MDD in these patients. Additionally, a discussion of where patients present and the interplay of clinicians needed to manage and monitor their treatment will be discussed.

Featuring:

**Madhukar Trivedi, MD**
Madhukar Trivedi, MD serves as the Director of the Center for Depression Research & Clinical Care, Betty Jo Hay Distinguished Chair in Mental Health & Julie K. Hersh Chair in Depression Research and Clinical Care at UT Southwestern Medical Center in Dallas, Texas.

**Sloan Manning, MD**
Sloan Manning, MD serves as the Medical Director at Novant Health Urgent Care & Occupational Medicine in Greensboro/Winston-Salem, North Carolina. He also serves as an Adjunct Associate Professor at the University of North Carolina School of Medicine and as the Co-Director of the Mood Disorder Clinic at Moses Cone’s Family Medicine Residency Program, in Greensboro, North Carolina. His areas of clinical interest include integrated mental health systems and physician education in primary care psychiatry.
